Parts Manual

Keep this manual with the machine at all times.

TLR5000AX2

Bale Wrapper

TLR5000AX2

Parts Manual

Thank you for choosing the Tubeline TLR5000AX2 Balewrapper.
Our hope is that it will give you many years of productive service.
This machine is designed to wrap bales in a continual line with plastic film.

Warranty and Limitation of Liability

All equipment is sold subject to mutual agreement that it is warranted by the company to be free from defects of materials and workmanship. But the company shall not be liable for special, indirect or consequential, damages of any kind under this contract or otherwise. The company's liability shall be limited exclusively to replacing or repairing without charge, at its factory or elsewhere, at its discretion. Any material, or workmanship defects which become apparent within one year from the date on which the equipment was purchased, and the company shall have no liability for damages of any kind. The buyer by the acceptance of the equipment will assume all liability for any damages, which may result from the use or misuse by his employees or others.

Warranty coverage is null and void unless Warranty Registration form has been completely filled in and is on file at Tubeline Manufacturing Ltd.

Serial Number

The implement serial number is located on the front left corner of the frame. *(See below)*

This number helps us to track changes and improvements and must be mentioned when ordering parts or requesting service. For your convenience, a space has been provided inside the front cover of this manual to record the serial number, model number, purchase date, and dealer name.

Model No: _____

Serial No: _____

Date Purchased : _____

Dealer Name : _____

18	1	TL500-100-062	Extension Spring

Note: Available for retrofit on older machines. Please contact dealer or manufacturer for details.

Film Sensor

Sensor wire must be adjusted so that only one layer of plastic is covering the end of the wire while wrapping. Adjustment can be made on the bracket and on the sensor wire. The end of the sensor wire behind the switch can be bent to allow the wire in front of the switch to drop down far enough to trip the switch when no plastic is present.

Film Sensor

ITEM	QTY	PART NUMBER	DESCRIPTION
	1	TLPSSK	Film Sensor Switch for 2007 Model X2 TL5500
1	13	HB 3/8-16X 3/4 Z5	Hex Bolt - 3/8-16 x 3/4" Grade 5 Zinc Plated Hex Cap Screw NC
2	4	HN 10-24	Nut - 10-24 Low Carbon Zinc Plated Machine Screw Nut
3	4	MS 10X1 3/4	Machine Screw 10-24x1-3/4
4	1	30895	Film Sensor Wire
5	1	TL109-100-348	Film Sensor Limit Switch
6	1	TL550-100-082	Wire Arm Clamp
7	1	TLFSB2007	Film Sensor Mtg. Brkt.
	1		12" Wire (Terminal 18 & 19)

Film Sensor Installation

- Install film sensor bracket
- Locate the wire labeled film sensor (pre-wired machine)
- Remove the plug and connect to film sensor switch
- Install toggle switch in the control panel
- Remove the jumper wire between terminal 18 & 19
- Connect wires from toggle switch to terminal 18 & 19

Toggle Switch

Film Sensor Wire Adjustment

Note: Use measurements as initial guide only.

- Measure length of wire from the hoop face (see previous page)
- 9.5" wire = approx. 3" between wraps = 8-9 layers per bale
- 9.5" wire should stop hoop rotation just after an empty tensioner passes the wire
- Lengthen wire 3" for 4 layers of wrap or 1.5" for 6 layers
- Shorten wire by 1.5" for 10 layers per bale

As a guide, if the hoop stops before an empty tensioner passes the film sensor wire, the wire is too short and if the hoop does not stop with one empty tensioner the film sensor is too long.

Remote Control

Remote Control

ITEM	QTY	PARTNUMBER	DESCRIPTION
		TLR SSKX2HD	Remote Control Kit
1	1	TLH HCX2HD	Hand-held Unit
2	1	TLR SSKX2HDL	Receiver Unit

Remote Control Installation

- Bolt receiver assembly to inside rear right of control box with connector plug at bottom.
- Locate the plug with 6 wires inside the control panel.
- Remove the jumper plug and connect the remote control board.

Note: All remote control units use the same frequency, no programming is required.

Remote Control Function

ON/OFF – Turns handheld unit on/off (detent has no function).

START – Starts the wrap cycle (unplug the table switch if you prefer to start each cycle with this button), this will not restart the hoop if cycle is broken after Hoop Start was triggered.

STOP – Stops the wrap cycle (if the table switch is not unplugged and it has a bale holding it down, it is nessecary to hold stop until the circuit is broken by switching to manual mode at the control panel).

LEFT - Steers left.

RIGHT - Steers right.

Optional Remote Start Add-on*

* To order this option you must have a remote control [see previous page(s)]

Remote Start Add-on Installation

Read the following instructions before attempting to install.

1. Make sure you have both Item A (remote switch) & B (power wire).
2. After making sure your wrapper's engine and control panel are switched off, open your control panel and unplug the 2 white pin plugs.
3. Connect the provided power wire (B) into the top #7 port on the control panel terminal strip. Older machines (Prior to serial # 13R058) will have only one top #7 on their terminal strip. Splice this new wire into the existing #7 wire to install.
4. The silver capped end on the provided wire MUST be threaded into this plug AND this port. (Fins on the cap will hold the wire in place once inserted).

5. Plug 2 white existing plugs into the 2 white plugs on the provided remote start switch (A).
6. Unscrew one of the hex jam nuts from the bottom of the switch on the remote start.
7. Drill 1/2" hole into bottom of control panel if your machine is older than serial # 13R058. If newer, remove black plug.
8. Slide the switch through the hole in the bottom of the control panel and refasten the hex jam nut you took off in step 6.
9. Close the control panel.
10. Apply provided decal to front of control panel, above installed switch.

Remote Start Add-on Test Run

Your new remote start is now complete.

To test this feature follow these steps:

1. Flip switch on bottom of control panel to Remote Engine Start.
2. Twist the green dial on your orange remote. (you may have to hold it open for a moment, especially if cold starting).
3. If the machine doesn't start you may want to engage the throttle slightly.

For troubleshooting please contact your local dealer or contact us using the information provided on page of this manual.

DO NOT use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.

Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.

^a "Lubricated" means coated with a lubricant such as engine oil, or fasteners with phosphate and oil coatings. "Dry" means plain or zinc plated without any lubrication.

^b Grade 2 applies for hex cap screws (not hex bolts) up to 152 mm (6-in.) long. Grade 1 applies for hex cap screws over 152 mm (6-in.) long, and for all other types of bolts and screws of any length.

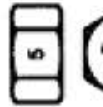

Fasteners should be replaced with the same or higher grade. If higher grade fasteners are used, these should only be tightened to the strength of the original.

Make sure fasteners threads are clean and that you properly start thread engagement. This will prevent them from failing when tightening.

Tighten plastic insert or crimped steel-type lock nuts to approximately 50 percent of the dry torque shown in the chart, applied to the nut, not to the bolt head. Tighten toothed or serrated-type lock nuts to the full torque value.

Metric Torque Value Chart
